

# Canadian Albacore Association

1969 YEAR BOOK

## CANADIAN ALBACORE ASSOCIATION

The purposes of the Association shall be as follows:

1. To provide a National authority to govern the affairs of the Albacore Class in Canada and to represent the owners of Albacores before local, national or international sailing authorities as may be necessary or desirable;
2. To maintain and enforce the Constitution, By-Laws and Class Rules in order to preserve the Albacore as a restricted One-Design Class of sailboat;
3. To encourage the building and adequate supply in Canada of quality Albacores at reasonable prices;
4. To sponsor and provide for regattas and competitive sailing of Albacores in Canada;
5. To bring together all sailors or other persons in Canada who may be interested in the Albacore Class;
6. To take any other actions as shall be in the best interest of the members of the Association and the Canadian owners of Albacores.

### COMMODORE'S MESSAGE

#### TO THE MEMBERS OF THE ASSOCIATION

1969 will prove to be a significant year in the development of the Canadian Albacore Association. No longer are we burdened with the struggle for existence, but instead we face the pleasant task of resolving those difficulties that only accompany success.

Our prime function will become that of providing a uniting force and a communications network capable of successfully dealing with the wishes of an ever increasing Albacore membership, many of whom have quite diverse views of the type of boat an Albacore should be. We are attracting to our ranks top skippers from other classes as well as those whose initial sailing experience will be in an Albacore. The various Albacore fleets range from Vancouver, to Montreal, to Maine, and to Florida. The ages of our members range from ten to sixty.

Now is the time to pause and reflect on our growth of the past ten years and consider not only our history, but also the course our association will take in the future.

We have a top notch organization, a first class yearbook and newsletter Shackles & Cringles, Canadian Championships that are the envy of all local classes, North American Championships that are attracting skippers from half the continent, and most important we have a very interested and concerned membership.

Currently the Specifications Committees of both the C.A.A. and U.S.A.A. are reviewing the class rules with the objective of preserving those aspects of the Albacore that have accounted in a large part to its popularity, namely its low cost, its uncomplicated modern one design hull with its relative freedom from a rapid obsolescence, and the possibility of sailing and racing in most conditions as a family unit.

The suggestion to review the rules currently in progress originated at a Fleet Captains' meeting in November, 1968. This meeting was called in an attempt to improve communications between all Albacore fleets and the C.A.A. executive. To develop an effective communications network it is essential that our district organizations become the focal points through which the wishes of the membership are channelled and the executive operations are conveyed back.

The growth of the Albacore class in 1968 was impressive, 450 Albacores in North America, and there is every indication that this rapid growth will increase in 1969 and the future. Provisional approval to become a licensed Albacore builder has been given to Western Sailcraft of Winnipeg, Manitoba, by the C.A.A. and to Poston Marine of Tampa, Florida, by the U.S.A.A.

I would like to wish each Albacore owner every success in his sailing endeavours for 1969, and may the winds of change not ruffle your sails too much.

*N. Donald Long*  
N. DONALD LONG  
COMMODORE

**LEN DAVIS** – Past Commodore  
The quizzical smile and quiet nonchalance of Len hide a determination to see that the Association gets what it needs. Len has continued to work hard for the Association in a position where many rest on their laurels. He sails from the Shadow Lakes Sailing Club.

**LARRY COND** – Vice Commodore  
Plaid shirt informality, that's Larry. His ready smile and sound practical advice has solved many problems for us. Officially, a member of the Toronto Sailing & Canoe Club and the Whitby Yacht Club, he shows up anywhere there is a good race in the offing.

**KEITH BULL** – Rear Commodore  
Editor of Shackles & Cringles. After several years at sea he still misses the briny although he finds Lake Ontario has a few tricks up its sleeve to surprize one. He sails out of the Toronto Sailing & Canoe Club.

**BOB GOODINGS** – Specifications Chairman  
The man in the hot seat who keeps his cool: Bob has done valiant work putting down in precise terms the varied requirements of the Class. Who would want to be Solomon, asks Bob. He is one of the Toronto Sailing Canoe Club's leading Albacore sailors.

**ALEX MacNAUGHTON** – Rear Commodore  
Sails at Muskoka Lakes Sailing Club. The clear air and water of these parts hone his organizing capacity to a fine edge, for he can surely run a great regatta as witness last year's Canadian National.

**VAL STOCK** – Chairman Reggata & Racing  
Sails with his brother at Muskoka Lakes Sailing Club. Modestly says he is just an average sailor.

**GORDON GRANT** – Secretary-Treasurer  
The sizzler from Lake Simcoe, Gordon is Fleet Captain of Kempenfeldt Bay Sailing Association where he generally leads the way round the marks.

**DOROTHY BARNERS** – Assistant Secretary-Treasurer  
Sails at Balsam Lake Sailing Club. Dorothy gets almost every Association problem thrown her way and however hot the pace, it never fazes her: She does admit though that it's a relief to get to the cottage in the summer where there is no telephone.

## BRIEF HISTORY OF THE ALBACORE CLASS

The Albacore began in 1954 when various clubs around Portsmouth, England, principally the Stokes Bay Sailing Club, were looking for an ideal boat for local conditions in the Solent, which is known for its high winds and rough wave conditions. This dinghy was to be light and modern and yet suitable for sailing and racing by families.

Experiments were begun with Swordfish hulls a boat designed by Uffa Fox and produced by Fairey Marine Limited of England. Several prototypes were produced. Finally the Committee was satisfied with the hull form which was basically that of the Swordfish with a higher freeboard and changes in the after end to give more stability. Fairey Marine was then asked to build the new boat and thus the Albacore was born.

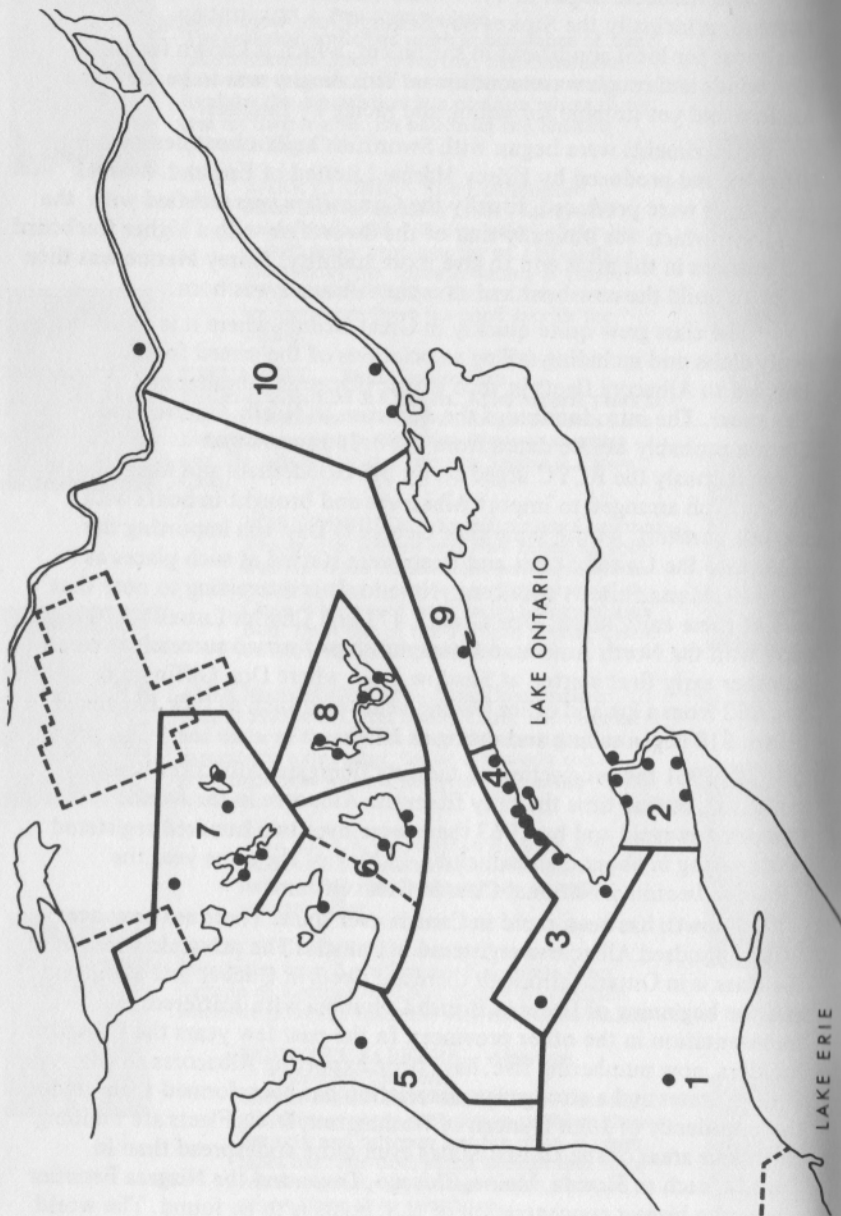

The class grew quite quickly in Great Britain where it is sailed by many clubs and including sailing associations of the armed forces. This led to Albacore fleets in such exotic places as Gibraltar and Singapore. The introduction of the Albacore to North America and Canada probably can be dated from 1958. It appears that simultaneously the RCYC urged on by Bill Gooderham and Muskoka Sailing Club arranged to import Albacores and brought in boats with English numbers. At the same time George O'Day was importing the boats into the United States and fleets were started at such places as Hyannis, Massachusetts and Reno, Nevada. It is interesting to note that two of these early boats, Don Grant's 471 and Charles Luttrell's 270 have won the North American Championships for two successive years. Another early fleet started at Shadow Lake where Don Giffin built No. 652 from a kit and other leading helmsmen such as Jack Langmaid in No. 618 began sailing and racing in 1959.

In 1961 the production of the first fiberglass Albacores began in Canada, at that time the only fibreglass Albacore in the world. Growth was rapid and by 1963 there were over two hundred registered boats sailing in about eighteen clubs. In May of the same year the Albacore became a National Class in Great Britain.

Growth has been rapid in Canada ever since. There are now over fifteen hundred Albacores registered in Canada. The principle strength of the class is in Ontario although there are fleets in Quebec and Manitoba and the beginning of fleets in British Columbia with scattered representation in the other provinces. In the past few years the Canadian builders, now numbering five, have been exporting Albacores to the United States and a strong class association has been formed there under the presidency of John Duncan of Washington, D. C. Fleets are building in various areas of the United States even more widespread than in Canada, such as Florida, Maine, Chicago, Texas and the Niagara Frontier where the biggest concentration of U.S. boats is to be found. The world wide total of Albacores now exceeds four thousand.

The basic unit of the Albacore organization is the fleet. Fleets are made up of three or more boats sailing in the same or near-by waters. Fleets are established by making application to the Canadian Albacore Association. The role of the fleet is to promote sailing and racing of Albacores in its own area and to provide for and encourage the measurement of boats. Many fleets have race series established for local trophies. The duties of the fleet consist in electing a fleet captain and secretary, the maintenance of an up-to-date list of members of the fleet and to provide liason with the district and CAA.

The growth of the number of fleets and the dramatic increase in the number of regattas led to the establishment of a district organization. Fleets which sail in near by waters and which may naturally be expected to visit back and forth for racing are formed into districts. At present most district fleets are no further than fifty miles from each other as can be seen by the map. The districts also elect a district captain and secretary and usually appoint a district measurer in charge of the measuring programme in each district. The district officers are elected by the members of the fleet executives as provided for in the constitution of the CAA. To allow for the divergency of sailing interests and conditions the districts are largely self-governing within the overall provisions of the CAA constitution.

Since their introduction last year districts have been almost completely organized and have been very active in the promotion of district championship regattas, the encouragement and development of new fleets, the selection of participants in the two North American Championship regattas and the avoidance of conflicting dates for open and invitational regattas. The districts also provide a valuable means of communication between the National Executive of the CAA and the local fleets. As the class has grown in size it becomes more and more difficult for the National Executive to keep directly in touch with all of the fleets and the district officers can provide valuable information and advice on the needs and problems of each area.

It is to be hoped that the administration of the class will never become a burden as the ultimate aim of all our activities is to enjoy sailing in all its forms. However, it is demonstrated that a minimum of organization is necessary to fully realize the pleasures of sailing and, more particularly, racing. The districts and the fleets can do a great deal to encourage sailors, improve the standards of seamanship and racing ability of the class generally, to encourage membership in the CAA and encourage sailing generally.

## 1968 Canadian Championships

Records for attendance keep falling as more and more boats arrive at Lake Rousseau each Fall for the annual Canadian Championships. Held this year September 13th to 15th, there were 154 entries. This we believe constitutes a record for any one class at a championship regatta in Canada. Particularly encouraging was the increased attendance by skippers in Class "C", some of whom will obviously be worthy competitors in the other classes next year and beyond that.

Following the disappointing conditions in 1967, everyone naturally hoped for better weather in 1968. Somewhat better had to be the verdict for winds were light and shifty throughout. However, the consistent performance of winning skippers in each class showed that it is mainly skill and not the fortunes or misfortunes of wind shifts that keeps a man at the top end of the fleet.

In Class "A", Bill Gooderham of RCYC repeated his win of 1966. He was closely followed by Don Giffin of Shadow Lake Sailing Club. Lloyd Feaver of the Royal Hamilton Yacht Club was 3rd. Obviously a man to watch for Lloyd was 51st in Class "B" last year!

Albert Price of the Wilson Yacht Club had a convincing win in Class "B". He was followed by David McFarlane of the Buffalo Canoe Club, with Tim Knight of the Bronte Harbour Yacht Club, a close third.

With nearly double the number of entries in Class "C", competition was keen. Spencer Dalton of Muskoka Lakes Sailing Club was 1st followed by club-mate, Gordon Wilson. Gordon nipped second place by three-quarters of a point from Marvin Downs of the Royal Hamilton Yacht Club.

As previously mentioned, winds were on the whole light and shifty. The first race on Friday afternoon was held in good winds but a major wind shift at the start ruined the plans of many skippers committed to a starboard tack approach. The second race on Saturday morning had to be abandoned due to lack of wind. Light winds persisted throughout Saturday although the Race Committee managed to get in one race in the afternoon. Sunday morning found the wind still light but steadier than on Saturday. Despite the light conditions two races were completed on Sunday morning.

### Canadian Championship Results

Class "A" - John Geikie Trophy - Bill Gooderham, R.C.Y.C.  
 Class "B" - Hiram Walker Trophy - Albert Price, W.Y.C. (U.S.A.)  
 Class "C" - Builders Trophy - Spencer Dalton, M.L.S.C.

BOX 504, OWEN SOUND, ONT.

### THE RULES OF THE CANADIAN ALBACORE CLASS (being By-law No. 7 of the By-laws of the Canadian Albacore Association) (Authoritative from 1st July 1968)

#### OBJECTS OF THE CLASS

The object of this Restricted Class is to provide a family racing and sailing boat which can lie afloat but is light enough to haul out daily and easy to transport on a trailer.

To achieve these objectives the following rules have been drawn up. Should a measurer consider that there has been any intentional distortion of hull shape, even if not contravening the prescribed measurements, or any other attempt to depart from the spirit of these rules, he shall report the matter to the Canadian Albacore Association.

#### 1. HULL DIMENSIONS

The completed hull shell shall be of uniform thickness throughout, except where it fays with other members or where stiffness is required; fibreglass hulls, minimum thickness 1/8 inch and moulded plywood hulls between 1/4 inch and 3/8 inch and shall only be built by Canadian Albacore Association approved builders on Canadian Albacore Association certified moulds.

- (a) Length overall of the hull, including stem band, but excluding normal rudder fittings measured from the outside of the transom to a point where the line of the deck meets the line of the stem, shall not exceed 15 feet 1/2 inch and shall not be less than 14 feet 11-1/2 inches.
- (b) Beam shall be measured to the outside of the skin, excluding any deck overhang.
  - (i) At widest section it shall not be less than 5 feet 7/8 inch nor more than 5 feet 1-7/8 inches.
  - (ii) At mid-length 9 inches above the bottom of the keel band it shall not be less than 4 feet 6-1/2 inches.
- (c) (i) Depth at mid-length measured vertically from the sheer line to the inside of the skin 6 inches from the fore and aft centre line of the boat shall not be less than 1 foot 10-1/2 inches or more than 2 feet. Sheer line shall be taken as the top of the deck or the gunwale at the side.
  - (ii) The stem height from the top of the deck at the centre line to the line of keel produced shall not be less than 2 feet 2 inches or exceed 2 feet 4-1/2 inches.
  - (iii) The depth of the transom vertically from the sheer line to the top of keel capping shall not be less than 1 foot 1-3/4 inches. The thickness of the transom shall not be less than 3/4 inches, provided that the thickness may be less in fibreglass boats if suitable strengthening is provided including re-inforcement for all fittings attached to the transom. The transom shall conform to the class drawing with profile tolerance of 1/4 inch measured at right angles to the skin.
- (d) All boats shall be fully decked from the stem for a maximum length of 4 feet 9-1/4 inches and a minimum length of 4 feet 1-3/4 inches. The after edge of the foredeck shall not be forward of a line drawn from the forward edge of the mast to the most forward permitted shroud position at deck on each side. (See Class Rule 1(1)). Side decks extending not more than 6-1/2 inches or less than 3 inches from the inside of the skin, shall be fitted between the foredeck and the transom, or until the after deck, if any, is reached. An after deck is optional. If fitted it shall not extend more than 3 feet forward of the outside of the transom. Deck overhang is optional maximum 3 inches beyond the outside of the skin including the rubbing strake at any point. No boat may be built or modified after the 1st of May 1963, so that at any point inside the skin the level of the side decks shall be below the sheer line.
- (e) In relation to boats built or modified after the 1st of May 1963, side benches shall be fitted on each side at thwart level (taken as highest point of the centreboard case) or below and shall extend forward at least as far as the shrouds from a point not more than 3 feet from the outside of the transom. They shall be of a width not less than 1 foot and not more than 1 foot 2 inches within these measurements.

- (f) The centreboard case shall conform to the Measurement Diagram. The sides of the centreboard case shall not exceed 7/8 inches in thickness. The centreboard slot in the keel and hog shall be between 1/2 inch and 1-1/8 inches in width.
- (g) A false keel which should be bevelled to fair into the keel band, shall be on the outside of the shell so that there is a minimum of 1/2 inch and a maximum of 3/4 inches clear of the skin at the center extending from the fore foot to the transom. The width at any point shall not exceed 3-3/4 inches. The width at any point within 9 feet 4 inches of the after edge of transom shall not be less than 3 inches.
- (h) As from 1st April 1965 one bilge keel of length 4 feet + 1/2 inch. (excluding fairing) shall be fitted on each side of the boat showing at least 1/2 inch clear at the centre to the full length. Bilge keels may be faired to the hull. The faired section at each end of the bilge shall not exceed 6 inches in length. The total width of the bilge keel (including fairing) shall not be less than 2 inches nor more than 2-1/2 inches. All four edge fairings shall be similar. All four end fairings shall be similar. The bilge keels shall be fitted so that the weight of the boat shall bear on the main and only one bilge keel when the boat is placed on a level surface.
- (i) Sheer shall be a fair continuous concave curve.
- (j) Tumble home of the topside shall not exceed 1 inch on each side.
- (k) Transom scuppers not exceeding a total area of 18 square inches are allowed and/or two suction bailers not exceeding an effective cross sectional area of 2 square inches each (i.e. area of the smallest hole or holes through which all the extracted water passes). Other apparatus to make the boat self draining is not allowed.
- (l) The distance of the shrouds at deck, aft of an athwartships line touching the aft side of mast at clamp shall not be less than 1 foot 3 inches.

## 2. WEIGHT AND WEIGHING

- (a) All boats shall be weighed in a dry condition. Built in buoyancy apparatus air bags or other material to provide a positive buoyancy of at least 600 lbs. shall be included in the weight of the boat. Buoyancy apparatus originally weighed with the boat shall not be removed or replaced unless the certified weight of the boat is checked by the measurer.
- (b) New plywood boats shall be weighed before they are put into water for the first time or otherwise wetted.
- (c) The dry weight of the completed hull, including the keel band and essential fixed metal work but stripped of all gear, including mast, boom, centreboard, detachable floor boards, pump (if any), all loose gear and rigging, shall not be less than 240 lbs.
- (d) If a boat is found to weigh less than the required weight owing to an error in building, permanent wooden or metal correcting pieces not exceeding 20 lbs. shall be fixed to the underside of the centre thwart and shall not be removed throughout the life of the boat.

## 3. CENTREBOARD

- (a) The centreboard shall not exceed 80 lbs. in weight.
- (b) When housed the centreboard shall extend neither above the sheer line nor below the keel. Only one pattern of centreboard is allowed of minimum width 11-3/8 inches measured at right-angles to the leading edge at a point on the leading edge 2 feet 6 inches from the bolt hole, and of a maximum dimension of 4 feet 2 inches from bolt hole to tip.
- (c) If of streamlined section, the centreboard shall be all wood apart from the usual protective edges and stiffening.
- (d) If of metal, the centreboard shall be of normal commercial flat sheet steel or aluminum not less than 1/4 inches in thickness. Any fairing shall not extend more than 1 inch from the edges.
- (e) The position of the centre of the centreboard bolt forward of the inside of the transom shall not be more than 8 feet 4-1/2 inches or less than 8 feet 2 inches.

## 4. SPARS

The rig shall be single masted sloop rig with an alternative headsail.

The type, section, material and weight of the mast and the boom are optional provided that:

- (a) The unrigged spars shall each pass through a circle of 4 inches diameter.
- (b) A maximum of one crosstree and/or one pair of jumper struts are used to stiffen the mast.
- (c) The jib stick or whisker pole for the foresail shall not be more than 6 feet overall.
- (d) The aft side of mast at deck level to the upper after edge of transom shall not be less than 10 feet 4-1/2 inches or more than 10 feet 5-3/4 inches.
- (e) The mast shall be sealed to keep out water or filled for at least the top 14 feet with closed cell expanded foam or foam pellets. (this sub-section effective September 30, 1967.)

## 5. HEIGHT OF SAIL PLAN

The height of the sail plan shall not exceed 20 feet 6 inches measured from the sheerline in way of the mast, and the actual point of measurement shall be marked by the lower edge of a black band painted on the mast. The height of the attachment of the forestay and the jib halyard shall not exceed 14 feet above the sheerline.

The height of the lower black band, above the sheerline, below which the top edge of the boom shall not be set, shall not exceed 2 feet or be less than 1 foot 8 inches.

## 6. MEASUREMENT OF SAILS

- (a) All sails that pass measurement on and after 1st April 1965 shall have inscribed in indelible ink in the tack corner, in letters at least half an inch high the initials of the measurer and the date of measurement. Any sail not so inscribed after this date shall be deemed to be unmeasured. All replacements or spare sails shall be measured and their measurements endorsed on the certificate. Each endorsement shall be signed and dated by the measurer. No boat shall have registered for class racing more than two mainsails, two large foresails, one small foresail, and new registration shall not be accepted at a greater rate than one mainsail, one large foresail and one small foresail every twelve months, unless the Canadian Albacore Association is satisfied it is by way of replacement of lost or damaged sails.
- (b) Mainsail - The measured area of the mainsail shall not exceed 90 sq. ft. The luff of the mainsail, (1) which shall not exceed 18 feet 6 inches shall be measured on the mast from the lower edge of the upper black band to the upper edge of the lower black band, which shall not be less than 1 foot 8 inches or more than 2 feet above the sheerline. No part of the headboard shall extend above the lower edge of the upper black band and the headboard shall not exceed 4 inches measured at right angles from the mast.
- (c) The measurement of the foot which shall not exceed 9 feet 8-3/4 inches shall be taken along the top of the boom from the inner edge of a black band painted on the boom to an extension of a line down the forward side of the mast groove, excluding any curvature. No part of the foot of the sail shall extend beyond the inner edge of the black band.
- (d) The area due to the curve of the leech shall not be included in measurement of the mainsail but the width measured at right angles to the luff at its mid point is not to exceed 6 feet 6 inches. The half height measurement shall be taken along the line of the fold (a) which is formed when the top forward corner of the headboard is placed on the bottom forward corner of the tack, with two halves of the luff coinciding and the sail smoothed out. When this measurement is taken the sail shall be smoothed out in dry condition on a flat floor, this measurement shall be taken over the full width, including roping, and any hollows in the leech are to be bridged by straight lines. Similarly a three quarter height measurement shall be taken by folding the top forward corner of the headboard on to the point formed at (a) above smoothing the sail and measuring the resulting crease which shall not exceed 3 feet 9-3/4 inches, effective for sails made after September 15, 1965.
- (e) Four battens are allowed in the mainsail and these shall divide the leech into approximately equal parts. The length of the upper and lower batten pockets shall not exceed 2 feet 6 inches and the length of the other batten

pockets shall not exceed 3 feet 4 inches. Mainsails which are not triangular are to be measured in accordance with Canadian Albacore Association rules for the measurement of sail area. The leech of the mainsail measured from the point where the sail leaves the mast at the head to the point where the sail leaves the boom at the clew measured in a straight line, shall not exceed 20 ft.

- (f) Foresail – Maximum area of large foresail 35 sq.ft.  
Maximum area of small foresail 27 sq. ft.
- (g) The luff measurement (L) shall be taken between the centre of the head and tack cringle and a diagonal measurement (D) from the centre of the clew cringle to the nearest point of the luff.

$$\frac{L \times D}{2} = \text{Area of foresail}$$

The areas due to curved edges of leech and foot shall not be included in measurement. No battens or other forms of stiffening are allowed in the foresail.

- (h) The official marking is  $\mathcal{A}$  above the assigned number which shall be displayed on the sails as shown on the official drawing.

## 7. MATERIALS

- (a) All sails shall be made of cotton, or woven synthetic fibre, minimum weight 3.8 oz. per sq. yd., maximum 7 ozs. per sq. yd. except that one transparent panel not exceeding 2 sq. ft. is permitted and shall be sewn into either main or foresail. This shall be in the lower half of the sail, and shall be no closer than 6 inches to any edge.
- (b) Every mainsail (without battens) set on boom, with clew hauled out and taut, must be capable of being rolled from foot to headboard tightly around the boom, without cracking the finish or cloth from which the sail is made.

## 8. BUOYANCY

- (a) Buoyancy of any type may be fitted under the foredeck, aft deck and side benches. Additional buoyancy may be carried provided that this does not extend into the clear plan opening of the cockpit, nor into the floor space. The clear plan opening of the cockpit is from the after edge of the foredeck to 3 feet forward of the outside face of the transom and between the faces of the shell athwartships above the highest point of the centreboard case. The floor space shall be taken as 1 foot 2 inches from the centreline between the shrouds to 12 inches from the centreline 3 feet forward of the outside face of the transom. Buoyancy apparatus giving a positive buoyancy of not less than 600 lbs. which shall count in the hull weight, shall always be carried in the boat whether cruising or racing. Removable buoyancy equipment included in the hull weight, shall be stamped with the boat's number and form part of its permanent equipment which shall not be removed or replaced unless the boat is re-weighed in accordance with rule 2(a). The disposition of weighed buoyancy shall be such that the flooded boat, in full racing trim, less sails, shall remain with the gunwales clear of the water and reasonably stable, both fore and aft and laterally, when persons of minimum combined weight of 600 lbs. are standing in the boat (not immersed above the knee) between the mast and the aft end of the cockpit. This test shall be for at least 30 minutes, but the measurer shall be satisfied that the equipment can be expected to support the boat and crew for long periods.
- (b) The measurer shall satisfy himself that the boat is equipped with effective buoyancy as required by these rules and that any inflatable buoyancy bags are in sound condition. He shall also confirm that the attachment and stowage of other than built-in buoyancy is effective.
- (c) It is the duty of the owner to see that the buoyancy at all times complies with rule 8(a). The Certificate of Registration is valid for twelve months from the date of the original buoyancy test, or the annual retest, provided that the certificate is suitably endorsed with the date of the buoyancy test and signed by a Club official. A sailing committee may at any time order a buoyancy test, the result of which shall be endorsed on the certificate of registration.
- (d) Hulls of fiberglass construction must have at least 4 cu. ft. of permanent buoyancy in the form of buoyancy tanks or rigid foam properly secured to the boat as part of the 600 lbs. of positive buoyancy.

## 9. RUDDER

Either lifting or fixed rudders are allowed. The arrangement is optional. The blade must conform to the class drawing or pattern.

## 10. TILLER PORT

A tiller port not exceeding 9 inches in width by 4 inches high is optional

## 11. CREW

The racing crew shall consist of two or more persons including the helmsman. In special circumstances it may be desirable for a boat to be raced single handed. Prior permission of the sailing committee must be obtained.

## 12. GENERAL

- (a) Apart from items already mentioned, all hull fittings, centreboard winches are optional.
- (b) There is no restriction on the finish.
- (c) The use is prohibited of any apparatus or contrivance outboard, or extending outboard, and attached to the hull, spars or rigging, to the person of the helmsman or crew, the purpose or effect of which is or may be to support or assist in supporting a member of the crew outboard or partially outboard.
- (d) Spinnakers are not allowed in the Canadian Albacore Championships but individual clubs using spinnakers should adhere to the one-design dimensions laid down by the Canadian Albacore Association as follows:  
The leech and luff shall not exceed 14 feet 0 inches 3 inches. Half the foot shall be 5 feet 9 inches 1-1/2. These measurements should be taken under a 5 lb. tension. Girth shall be measured with the sail folded in half putting the luff and leech and the two clews together and then spread evenly and flat on the floor without tension. The measurement shall be taken from the head cringle 7 feet 0 inches down the luff and leech in a straight line and also 7 feet 0 inches down the opposite side of the sail as folded. This measurement shall be 5 feet 5 inches 1-1/2 inches. It shall be taken when the cloth between the head of the sail and the points of measurement and immediately below are spread out smoothly on the floor. The sail parallel to the girth measurement should be pulled only enough to smooth out vertical wrinkles, but not enough to produce transverse wrinkles. Spinnaker pole length including fittings shall not be greater than 4 feet 6 inches. Sail cloth weight shall be not less than .75 oz. nylon. Only one spinnaker shall be allowed to each boat. Attachment of the spinnaker halyard shall be not more than 14 feet 1 inch above the sheerline.
- (e) The registration (sail) number on boats built after 1964 shall be carved into the keelson, the figures shall be at least 1 inch high on plywood boats. Builders of fiberglass boats must put the hull number in the boat in a manner approved by the specifications committee. All numbers with the owner's name and address shall be reported to the Canadian Albacore Association Secretary for the class registry.  
The Canadian Albacore Association requires standardized sail markings for uniform identification of the class in Canada. The official marking is as per the official drawing above the number. Official Canadian numbers are assigned by the Canadian Albacore Association, however, a block of numbers may, in the discretion of the Executive Committee of the Association, be assigned to an approved builder who may assign numbers to boats produced by that builder on behalf of the Association. A boat retains its sail number (corresponding to the hull number) throughout the life of the boat. When the ownership of a boat is transferred the number of the boat and sails remains although the boat is transferred.  
NOTE: Existing owners are not required to change their markings or numbers except in the case where confusion might arise in the opinion of the Specifications Committee. Original English numbers may be retained but must be placed below the  $\mathcal{A}$ . No numbers will be duplicated in the Canadian registry. Details of the size of numbers may be obtained from the Specifications Committee.  
Sail numbers, letters and emblems shall sharply contrast in colour with the sail and shall be placed at different heights on the two sides of the sail, those on the starboard side being uppermost, to avoid confusion owing to translucency of the sail.

Support Gam the ALL CANADIAN Magazine on Yachting

## GAM ON YACHTING

Room 307 - 29 Colborne Street - Toronto 1, Ontario

THE BEST SAILS IN THE WORLD ARE MADE BY

# J.C. MERIAN

P.O. BOX 601, WINDSOR, ONTARIO

In our humble and modest opinion

Well, all kidding aside, they are no worse than anyone else's  
and certainly no dearer

## THE GRAMPIAN ALBACORE

designed by Uffa Fox

*Canadian built by Grampian Marine under special license with Fairey Marine*

- Stainless Steel Rigging
- Anodized Mast and Boom foam filled
- Wide centre board trunk for use with wooden centre board if required
- Sliding Track for main sheet
- Aluminum Centre Board
- Additional overhang for stability
- Oiled Teak Splash Rail and Thwart for easy maintenance

**A winner everytime in both American and Canadian 1967 Albacore Championships.**

## CANADIAN ALBACORE ASSOCIATION

1. Add buoyancy in the bow and have your buoyancy test each season.
2. Carry 2 large plastic pails clipped or tied to the boat.
3. Be in good physical condition to avoid rescue fatigue.
4. Climb to the high side quickly and put a foot on the centerboard.
5. Be sure the mast is sealed completely or foam filled above the spreaders.
6. Wear woollens, storm wear and a life jacket in cool conditions.
7. Carry a 5 lb. anchor and 100 ft. of 3/16 nylon line to prevent drifting into rocks.
8. Prevent mast going right down if possible.
9. Use shock cord or a jam cleated line to prevent the board from dropping into the trunk if upside down.
10. Fasten loose gear and be prepared to drop sails quickly.
11. Use a pair of leather faced gloves with the fingers cut off to prevent slipping off the board or boat and to hold sheets easier.
12. Brief your passengers and crew on what to do in case of capsize and always insist on children wearing lifejackets.
13. If you must wait for help, tie a jib sheet across the hull to the opposite fairlead to hold on to.
