1970
YEAR
BOOK

CANADIAN ALBACORE ASSOCIATION

The purposes of the Association shall be as follows:

1. To provide a National authority to govern the affairs of the Albacore Class in Canada and to represent the owners of Albacores before local, national or international sailing authorities as may be necessary or desirable;
2. To maintain and enforce the Constitution, By-Laws and Class Rules in order to preserve the Albacore as a restricted One-Design Class of sailboat;
3. To encourage the building and adequate supply in Canada of quality Albacores at reasonable prices;
4. To sponsor and provide for regattas and competitive sailing of Albacores in Canada;
5. To bring together all sailors or other persons in Canada who may be interested in the Albacore Class;
6. To take any other actions as shall be in the best interest of the members of the Association and the Canadian owners of Albacores.

COMMODORE'S MESSAGE

In the autumn of 1968, the Bronte Yacht Club held a "One-Of-A-Kind" Regatta. In this regatta, there were actually two boats of a kind and each popular centre board class in Ontario was represented. Boats were handicapped by reference to their water-line length and sail area. Don Giffin and Jack Langmaid, both of the Shadow Lake Sailing Club, represented our association, sailing their own Albacores. Among the other classes participating were the Y-Flyer, Fireball, Wayfarer, Firefly, Enterprise and Windmill. There were three races. The Albacore won. Congratulations and our thanks to Jack Langmaid and Don Giffin.

We are pleased to report the formation of a number of new clubs. Some, with their Commodore or Fleet Captain's names, are as follows:-

South Muskoka Lakes S.C., W.R. Gimby;	Geneva Park S.C., David Nicholson;
Penn Lake S.C., R.D. Moffat;	Westwood S.C., A. Casselman;
St. James Town S.C., Richard Austin;	Grimsby S.C., F.C. Cooper;
Midland Bay S.C., E. McGrath;	Pointe au Baril S.C., William Phippen;
Six Mile Lake S. C., K. Lawrie;	Cavendish Fleet, G. Opsal;
Lake St. Louis S.C., E. Burke;	Stormont Yacht Club.

We welcome members of these clubs and also the many other new members of our association. New members may be interested in our activities. In September we usually have the Canadian Albacore Championships and last year 187 boats participated at Cleavelands House, Lake Rosseau, Muskoka. The helmsmen were divided into four classes, A Class, B Class, Senior (40 and over) and Junior (under 21). This year the Canadian Albacore Championships will again take place at Cleavelands House and will be on Friday, Saturday and Sunday, September 25th, 26th and 27th. Another regatta, the North American Championships is sponsored alternately by our association and by the United States Albacore Association. This year it is our turn, and it will be held at the Bay of Quinte Yacht Club, Belleville, Friday, Saturday and Sunday, June 19th, 20th and 21st. In contrast to the Canadian Championships, participation in the North Americans is by invitation. Our new members may be interested in knowing that in February of this year, a social evening was arranged at which three of Canada's top sailors, all with Olympic experience, addressed us. It is expected this type of evening will be repeated.

There are now over 3,000 Albacores in Canada and 400 in the United States. The American boats have been manufactured by our builders in Canada. This is a tremendous record of growth when one considers that the Albacore was first introduced from England into Canada in 1958.

We hope you have a good year racing or day sailing, or both, in your Albacore.

Yours truly,

ALEX MACNAUGHTON,
Commodore.

N. DONALD LONG – Past Commodore
Don's outgoing personality and boundless energy were put to good use on behalf of the Association during 1969, a year with its growing pains. Don is a member of Oakville Yacht Squadron. Already as Past Commodore he has been tremendously helpful to the new executive in easing their path in office.

KEITH BULL – Vice Commodore
After four years Keith has laid down the burden of editing Shackles & Cringles and the Yearbook, and has left a fine record to follow. Toronto Sailing & Canoe Club is his sailing home, and he scores well in their vigorous fleet.

SEYMOUR MOGFORD – Vice Commodore
Seymour polished an already fine reputation as an organizer with his good work in helping the 1968 North American Albacore Championship at the Royal Hamilton Yacht Club be the success it was. His efforts in fleet organization and reporting are already showing good results.

DANIEL P. OWEN – Rear Commodore
Enthusiasm and an over-active family keep Dan trailing his boat throughout most of the summer. Dan sails as a member both the R.C.Y.C. and Kettle's Sailing Club. He will be holding crew-selection trials with his wife and three daughters shortly.

DAN POYNTZ – Regatta Chairman
Dan specializes in breeding fine sailors (sons Barry and Garry) instead of being one. The Poyntz family sails out of Lake of Bays Sailing Club.

BOB GOODINGS – Chairman
Specifications Committee
Of all people during 1969, Bob has had the tough job of interpreting the wishes of the membership regarding rule changes and putting them into terms precise enough to protect the integrity of the class, and yet broad enough to permit growth of ideas.

CHRIS PATERSON – Secretary-Treasurer
A fine sailor from Balsam Lake Sailing Club, Chris often has his wife, Nancy, as crew. His keen eye for figures helps ensure that the Association's finances continue to remain healthy.

DOROTHY BARNES – Assistant Secretary-Treasurer
And Princess of the Executive, Dorothy handles a vast volume of work for the Association and is an unfailing source of guidance and wisdom for recent arrivals on the executive.

BRIEF HISTORY OF THE ALBACORE CLASS

The Albacore began in 1954 when various clubs around Portsmouth, England, principally the Stokes Bay Sailing Club, were looking for an ideal boat for local conditions in the Solent, which is known for its high winds and rough wave conditions. This dinghy was to be light and modern and yet suitable for sailing and racing by families.

Experiments were begun with Swordfish hulls a boat designed by Uffa Fox and produced by Fairey Marine Limited of England. Several prototypes were produced. Finally the Committee was satisfied with the hull form which was basically that of the Swordfish with a higher freeboard and changes in the after end to give more stability. Fairey Marine was then asked to build the new boat and thus the Albacore was born.

The class grew quite quickly in Great Britain where it is sailed by many clubs and including sailing associations of the armed forces. This led to Albacore fleets in such exotic places as Gibraltar and Singapore. The introduction of the Albacore to North America and Canada probably can be dated from 1958. It appears that simultaneously the RCYC urged on by Bill Gooderham and Muskoka Sailing Club arranged to import Albacores and brought in boats with English numbers. At the same time George O'Day was importing the boats into the United States and fleets were started at such places as Hyannis, Massachusetts and Reno, Nevada. It is interesting to note that two of these early boats, Don Grant's 471 and Charles Luttrell's 270 have won the North American Championships for two successive years. Another early fleet started at Shadow Lake where Don Giffin built No. 652 from a kit and other leading helmsmen such as Jack Langmaid in No. 618 began sailing and racing in 1959.

In 1961 the production of the first fiberglass Albacores began in Canada, at that time the only fibreglass Albacore in the world. Growth was rapid and by 1963 there were over two hundred registered boats sailing in about eighteen clubs. In May of the same year the Albacore became a National Class in Great Britain.

Growth has been rapid in Canada ever since. There are now over fifteen hundred Albacores registered in Canada. The principle strength of the class is in Ontario although there are fleets in Quebec and Manitoba and the beginning of fleets in British Columbia with scattered representation in the other provinces. In the past few years the Canadian builders, now numbering five, have been exporting Albacores to the United States and a strong class association was formed there under the presidency of John Duncan of Washington, D. C. Fleets are building in various areas of the United States even more widespread than in Canada, such as Florida, Maine, Chicago, Texas and the Niagara Frontier where the biggest concentration of U.S. boats is to be found. The world wide total of Albacores now exceeds four thousand.

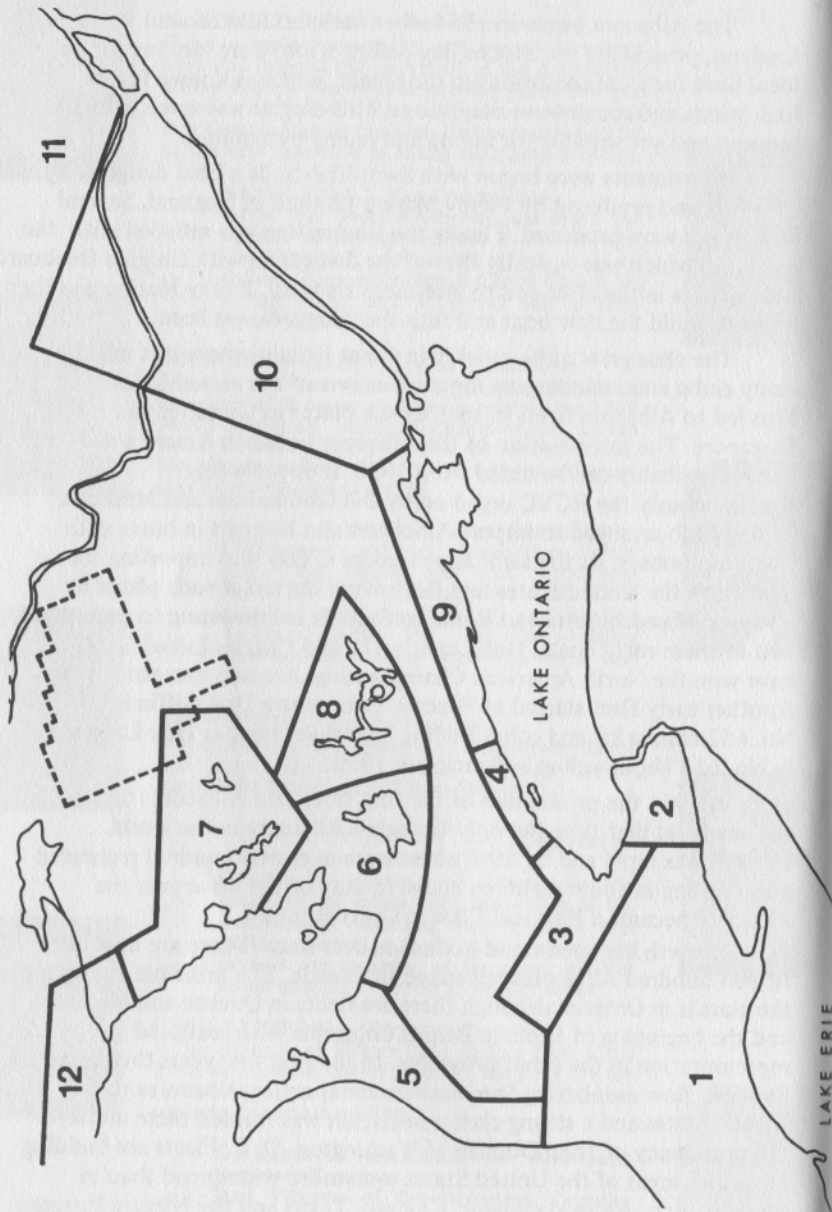

FLEET AND DISTRICT ORGANIZATION

The basic unit in the Canadian Albacore Association organization is the fleet which consists of three or more boats sailing together in the same locality. A fleet becomes a part of the C.A.A. organization by making application to the Association for recognition and at the same time reporting the names of its elected fleet captain and secretary, the title and location and providing a list of members. The role of a fleet is to promote sailing and racing of Albacores in its own area and to provide for and encourage the measurement and buoyancy testing of its members' boats.

The rapid increase in the number of fleets has led to the establishment of the district organization. Fleets in the same area are formed into a district and a district fleet captain and secretary are elected by the fleet executives in accordance with the constitution of the C.A.A. A district measurer is usually appointed to look after the measuring program within the district. The districts are largely self governing and provide a means of communication between the fleets and the CAA executive, arrange a district Albacore championship regatta, encourage the development of new fleets and prevent as far as possible the conflicting of dates of open and invitational regattas. As the class continues to grow, the importance of the district officers increases as it becomes more difficult for the National Executive to maintain contact with the fleets.

The administration of the class should never become a burden as the object of all our activities is the enjoyment of sailing. However, some organization is necessary to attain this object. By spreading the work over the fleets and districts no person or group will be required to undertake more than can reasonably be accomplished.

The district and fleet organization can do a great deal to improve the standards of safety, seamanship and racing within the class, and to encourage sailing in general and of Albacores in particular.

19th February, 1970.

To our Friends in Canada,

To be invited to write to you is a great privilege. Our sport of sailing makes a common bond, but reciprocal communications can only be good for the Albacore Class. Here in the United Kingdom we race them hard, and have a wide selection of boats, ranging from the original No.1 to over 2000, the latest being hotrods. It is significant that in the last two National Championships, No.31 was 4th in 1968 and No.24 was 11th in 1969. Not bad for boats built nearly twelve years ago, and wooden at that!

There is much written and talked about gear and gadgets, tuning and other one-upmanship devices, but it is conclusively proven that a well sailed Albacore, with a good suit of sails, will and can win in competition with the most modern racing machines. I am all for development. It is good for the Class and provokes the interest of the enthusiast, young or old, but there is little that one can say makes one Albacore go faster than another, except the 'nut' on the end of the tiller.

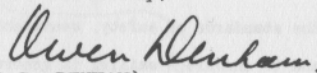

It is important that strict control be maintained over the hull shape and the rig specification. The thicker wooden plate does seem to be a must, mainly due to the hydro-dynamic advantage of the shape, and all the U.K. racing boats have this. I am firm in the belief that a boom end mainsheet enables me to get along faster than with a centre mainsheet. In the heavy weather of the 1968 Championship, the first two boats had boom end sheeting. In lighter weather the difference is marginal for me anyhow, because I like a blow.

This year the "in" thing is a stiff mast, but I am fitting a centre boom block from my boom end rig, to have the advantage of cleating my main when close reaching and on the wind. If it is a nuisance, I can revert to my usual old-fashioned arrangement which has not let me down yet.

I look forward to the day when we can exchange our helmsmen to take part in international events. Keep the Class strictly on the original lines from the hull and rig dimensions, but do not frustrate those who like to play with gadgets. It doesn't matter much, but it will retain interest in the boat and keep the Class lively.

Good sailing in 1970.

Yours sincerely,

(O.S. DENHAM)
Commodore.

UNITED STATES ALBACORE ASSOCIATION

2824 PENNSYLVANIA AVENUE, N.W.
WASHINGTON, D. C. 20007

May 1970

To the Members of the Canadian Albacore Association:

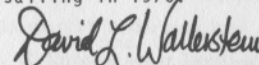

It is my pleasure on behalf of the United States Albacore Association to send you our good wishes for the 1970 season. This is our fifth year and for the first time our greetings are not being conveyed by John Duncan. After four years at the helm John's many long hours have left the U.S.A.A. in an excellent position for further rapid gains. I know that our many Canadian friends join me in expressing our appreciation to John for establishing the U.S.A.A. and the fine relationship that has developed between our two associations.

To bring you up to date on developments in the United States we are starting the season with eighteen fleets and more than 600 owners. Our first builder has begun production and if all goes as planned we hope to add at least five more fleets before 1970 is over. We may well exceed this figure if our negotiations with other builders are successful.

The Mid-Winter North American Albacore Championship in Tampa, Florida, got our season off to a great start! The ten boats from Canada made an excellent showing with Bill Gooderham taking first place in the A Division. Only Harry Sindler's second was able to break the Canadian hold on the top seven places. For the first time we had a B Division and Ron Golden came through with a third.

Let me take this opportunity to invite you to our 1970 United States Championship to be held at Fishing Bay (Deltaville), Virginia, October 9-11. The Fishing Bay Yacht Club is host and they are old hands at sponsoring championship regattas. The sailing should be nothing short of terrific at that time of year and for those of you who can spend a few more days with us Williamsburg is close by. There will be A and B Divisions so we hope many of you can join us and see if Jack Langmaid will be able to make it three straight wins. Last year he finished 1/4 point ahead of the third place boat so you know there will be plenty of excitement.

Again, on behalf of our members smooth sailing in 1970.

David L. Wallerstein
President

DOWN WIND PLANING TECHNIQUE

by

Charles F. Loutrel Jr. &
Jefferson D. Parker Jr.

Handling a small boat in heavy air can be quite a challenge especially in gusting winds. The following paragraphs offer a technique used by the authors for playing heavy-air puffs while sailing a planing hull boat off the wind.

If a skipper planing down wind keeps his boat directly under the tip of his mast, it is impossible to capsize. Let me repeat: KEEP THE BOAT DIRECTLY BENEATH THE TIP OF THE MAST! Many present day sailors automatically head up hoping to spill wind from their sails. This is wrong. When planing, the centripetal force on the mast generated by a sudden change in course (such as heading up) will force the boat to heel still further. If the skipper headed off this would put the boat under the tip of the mast. Now if the boat is still out of control, ease the mainsail until control is regained. At this point trim the mainsail back in until it is either full, or until you cannot carry any more sail and still keep the boat flat.

There are two other points to keep in mind when planing in heavy air. One is the boom vang. Be sure that the boom vang is tight enough to keep the leech from twisting more than twenty degrees from the boom angle to the angle of the head board. If the leech is any looser, the top of the sail will be eased too far, and on a broad reach or run, the top one-third of the sail will actually be forward of the mast causing the boat to tip over to windward, or at least be very erratic and uncontrollable!

Assuming that a skipper is practicing sailing under the mast and keeps his boom vang tight enough, there is only one more aspect to be considered - the centreboard. The centreboard should be raised or lowered so as to balance the boat. If the boat has a weather helm (wants to head up), raise the centreboard until the helm is relieved. If the boat has a lee helm (wants to head down) lower the centreboard until the boat balances. It is necessary to note that the proper position for the centreboard will change depending on the amount of wind, sea, and also depending on the point of sail. Do not forget that as a boat heels it will develop a weather helm. This should not be corrected. The boat must be sailed flat when planing.

In sailing off the wind there are three main things to remember;

1. Sail under the tip of the mast (keep the boat flat)
2. Have the boom vang tight enough
3. Balance your boat so you have little or no helm by using the centreboard.

It cannot be stressed enough that to plane you must keep your boat FLAT, FLAT, FLAT.

1969 CANADIAN CHAMPIONSHIPS

MORE BOATS, SAILORS, ENTHUSIASM AT CANADIAN CHAMPIONSHIPS

A record turnout (187 entries) participated in the 1969 CAA Championships held at Cleveland's House, Lake Rosseau, Ontario on September 12th - 14th. The large number of entries made it necessary to race on two different courses and in four classes. This year's regatta marked the advent of CAA Junior Championship and Senior Class.

The series started Friday with winds of 30 M.P.H. and the first race was cancelled. On Saturday 3 races were run with very light winds although the wind freshened to 12 - 15 M.P.H. for the 3rd race of the day. The fourth race on Sunday began in a breeze of 8 - 10 M.P.H. and steadily increased until marginal planing was possible.

The final standings were:-

CLASS "A"	CLASS "B"	SENIORS	JUNIORS
1. G. Revett, NSC	P. Cowan, CSC	A. McNaughton, MLSC	A. Campbell, MLSC
2. D. Owen, RCYC	M. McConachie, OSSA	R. Boxer, LJYC	D. Adam, BC
3. D. Giffin, SLSC	A. Sargeant, KBSA	D. Pfeifer, YYC	W. McLaughlin, MLSC

Our gratitude goes out to the many people who helped in so many ways to make this regatta such a memorable one, but for them.....

Here is a complete rundown for each class:-

DAN OWEN BLITZES COMPETITION IN BLUSTERY NORTH AMERICAN

Dan Owen from the Royal Canadian Yacht Club sailed a consistent 2-4-2-4-2 series to dominate the Albacore North American Championship. In the five race (with best four to count) series held at the Buffalo Canoe Club on August 8th, 9th and 10th, Owen locked up the championship by the end of the fourth race.

Fifty-eight skippers from the United States and Canada competed in mainly heavy, gear-busting conditions. After a delayed start on Friday due to the heavy conditions, the first race got off in a 20 M.P.H. in-shore breeze. The high wind coupled with heavy, choppy seas contributed to several capsizes, especially at the jibing mark. Don Barnes of R.H.Y.C. was heading for a perfect series with first place finishes in both the Friday race and the second race Saturday morning when broken fittings forced his withdrawal from the rest of the regatta. The high winds and seas continued throughout the three races held Saturday increasing from 15 - 20 M.P.H. Saturday morning to 20 - 30 M.P.H. by the afternoon. Race number four held on Saturday afternoon saw more broken fittings and unplanned swims as only twenty-eight of the fifty-eight boat fleet survived the 35 M.P.H. gusts. Dan Owen proved his mettle in both heavy and light, shifty conditions by showing his championship form with a second place finish in the fifth race Sunday morning. The last race started in light conditions with spotty pockets in places. Extremely shifty conditions with wind growing stronger as the race progressed provided the most challenging tactical race.

Competitors will long remember this regatta. Among the memories will be the wild planning on six to eight foot waves with hulls almost breaking the water surface; the sight and fateful experience of skippers attempting to jibe or come about at the mark only to end with spectacular capsizes; half the fleet sailing well out on the beat after a five minute re-start gun only to scurry back to catch the ten minute starting gun; the tremendous organization and facilities provided by the Buffalo Canoe Club and the "class" demonstrated by Dan Owen in capturing the championship.

NORTH AMERICAN ALBACORE CHAMPIONSHIP

LANGMAID PLAYS NIP AND TUCK AT U. S. NATIONALS

The U.S. National Albacore Championships were held at Little Egg Harbour, New Jersey this year, Friday to Sunday, September 26-28th, 1969. A good contingent of Canadians participated including Jack Langmaid, defending champion from SLSC, Peter McLaughlin and George Elliott from Muskoka SC, Tony Griffin from Balsam Lake SC, and Dan Owen from the RCYC.

Conditions varied from very light winds to moderate airs, with quite marked and variable wind shifts in all six races.

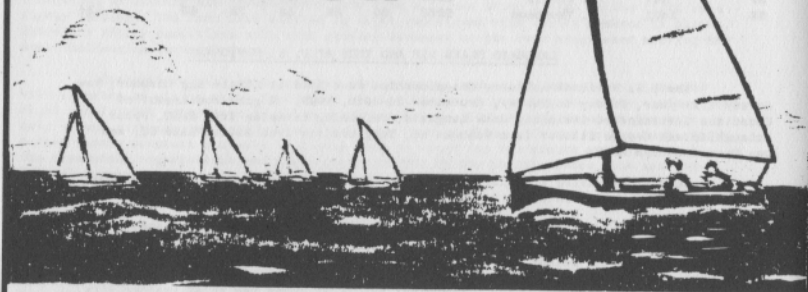

Of the total entry of about 35 boats, approximately 23 were designated A Class, and the rest B class. Jack Progelhof, Geoff Revett, and other U.S. stars sailed hard to bring the trophy to the Motherland, and going into the last race on the Sunday morning one had the very exciting situation of Revett, Progelhof, Langmaid and McLaughlin being within a point or two of each other. Progelhof was first round the first weather mark, and Dan Owen then took the lead and held it for the rest of the race. In the next four places however, were the four contestants for the overall championship. Progelhof clung doggedly to second place until round the last mark, followed by Revett, Langmaid and McLaughlin. In a spectacular last minute effort to salvage victory, Jack Langmaid who had to beat Progelhof by one position and Revett by two positions, tacked towards the port lay line, picked up a significant wind shift and crossed the line a couple of boat lengths ahead of Progelhof, who squeaked home third, six feet ahead of Revett.

It was one of the most exciting finishes imaginable, and Jack Langmaid demonstrated once again the characteristic of a real champion.

Overall results were:-

		Points
1st	Jack Langmaid	SLSC 12 1/2
2nd	Jack Progelhof	Wilson YC 12-3/4
3rd	Geoff Revett	Niagara Lake SC 12-3/4
4th	Peter McLaughlin	MLSC 17
5th	Chip Dore III	Little Egg Harbor SC 23-3/4
6th	Dan Owen	RCYC 26-3/4

Winning finish

Whether you race fibreglas or plywood, Interlux Yacht Paints will help you clean up the trophies. We'll supply just about any finish you need: polyurethanes, finishes, varnishes, primers, antifoulings—name it, we make it. And we make it better, that's why we're still the world's number one marine paint manufacturer.

"CANADA'S FINEST ALBACORE"

Standard boat comes with gold anodized tapered Proctor mast and and bendy boom, full foam floatation including under the fore and stern decks, mahogany centre board and rudder.

SKENE BOATS LIMITED

19 Caesar Avenue, Ottawa, 12, Ontario.

WHERE WERE YOU WHEN THE BOAT TIPPED OVER?

by

Jack Langmaid

Fear of capsizing keeps many sailors on shore during a heavy blow. There is often sound reasoning here because unless you are prepared for self-rescue, dumping can be a pretty dangerous business. Since most of the thrill of sailing comes in a heavy wind, a little preparation in advance can remove most of the fear and danger, and give you a chance to really enjoy the challenges and exhilaration of heavy weather sailing.

Anyone who has helped rescue capsized sailors will know how often the sailors are completely exhausted in a matter of a few minutes. This is due mainly to two things; exposure to the cold and by far the most important reason, shock or fear of the unknown. These same people could float around in a life jacket off the end of their dock for half an hour and show little exhaustion because they are relaxed and not worried.

A key factor in self-rescue is the ability to relax under stress and that comes from confidence in your boat and yourself. To gain that confidence, I suggest that you practice dumping your boat in a protected area with some help close by.

Your Albacore, with proper buoyance, should sail well full of water, with two people in it. The most common fault is lack of sufficient buoyancy in the bow. I find it best to have two large buoyancy bags under the bow deck so that this area is nearly completely filled. Once you know you can sail the boat full of water then figure out how to empty it.

The first time I dumped accidentally, last year, my crew and I uprighted the boat and began to sail the next leg, full of water. Unfortunately, the bucket was wedged under a buoyancy bag in the bow; the automatic bailers were sealed shut because they had been leaking; and when we released the shock cord to open the scuppers, I found they worked well in the gusts, but between gusts the water poured in! Finally getting the bucket free, we (my wife, Ruth) had to bail out the boat while we were sailing. I complained she didn't bail fast enough - following her comments to that, I decided I'd better change the position of the bucket, repair the self bailers and change the scuppers. The funnels were replaced with pieces of plexi-glass, hinged at the top so gravity will close them between gusts.

THE RULES OF THE CANADIAN ALBACORE CLASS
(being By-law No. 7 of the By-laws of the Canadian
Albacore Association) (Authoritative from 1st Jan. 1970)

1. OBJECTS OF THE CLASS

The object of this Restricted Class is to provide a family racing and sailing boat which can lie afloat but is light enough to haul out daily and easy to transport on a trailer.

To achieve these objectives the following rules have been drawn up. Should a measurer consider that there has been any intentional distortion of hull shape, even if not contravening the prescribed measurements, or any other attempt to depart from the spirit of these rules, he shall report the matter in writing to the Canadian Albacore Association.

2. SPIRIT OF THE RULES

Any changes made to the hull, sails, standing and running rigging not on the boat when the measurement certificate was issued and is not expressly permitted by the rules shall be brought to the attention of the Specifications Committee and/or the Chief Measurer in writing for a ruling to ensure that such changes are within the Spirit of the rules. The onus of establishing that the change is expressly permitted by the rules is on the owner.

Changes made without a ruling shall be made at the owner's risk and shall not obligate the Specifications Committee and Chief Measurer to accept such changes.

Measurers shall report such matters to the Specifications Committee.

Any boat having features, not expressly covered by the specific rules of the Class, that are not consistent with the spirit of the rules as interpreted by the Executive Committee or the Specifications Committee shall not be approved and cannot race even though there is no specific restriction preventing the item in question. Such boat is liable to have its measurement certificate revoked until the violation of the rules is rectified.

3. HULL SHAPE AND HULL DIMENSIONS

The completed hull shell shall be of uniform thickness throughout except where it fays with other members or where stiffness is required; fibreglass hulls, minimum thickness 1/8 inch and moulded plywood hulls between 1/4 inch and 3/8 inch and shall only be built by Canadian Albacore Association approved builders on Canadian Albacore Association certified moulds.

The shape of the hull is to be maintained as a strict one-design and no changes will be permitted whether or not the change affects one of the measured parts of the rule on hull measurement.

- 3.1 Length overall of the hull, including stem band, but excluding normal rudder fittings measured from the outside of the transom to a point where the line of the deck meets the line of the stem, shall not exceed 15 feet 1/2 inch and shall not be less than 14 feet 11-1/2 inches.
- 3.2 Beam shall be measured to the outside of the skin, excluding any deck overhang.
 - 3.2.1 At widest section it shall not be less than 5 feet 7/8 inch nor more than 5 feet 1-7/8 inches.
 - 3.2.2 At mid-length 9 inches above the bottom of the keel band it shall not be less than 4 feet 6-1/2 inches.
- 3.3
 - 3.3.1 Depth at mid-length measured vertically from the sheer line to the inside of the skin 6 inches from the fore and aft centre line of the boat shall not be less than 1 foot 10-1/2 inches or more than 2 feet. Sheer line shall be taken as the top of the deck immediately above the hull skin or the gunwale at the side.
 - 3.3.2 The stem height from the top of the deck at the centre line to the line of keel produced shall not be less than 2 feet 2 inches or exceed 2 feet 4-1/2 inches.
 - 3.3.3 The depth of the transom vertically from the sheer line to the top of keel capping shall not be less than 1 foot 1-3/4 inches. The thickness of the transom shall not be less than

With everything working, and with a bit of practice, I found I could sail the boat dry in a few minutes. I should add, if water is up or over the centreboard trunk, it is best to bail until the water is a couple of inches below the top. Then open your self bailers and scuppers in the stern - weight well aft, and begin to sail on a broad reach. As soon as the boat is moving well, gradually go on a closer reach - before long you'll be planing!

Self bailers in the bottom of your boat will begin working at 4-5 knots and will usually work on a windward leg. Scuppers need more speed and of course, the water concentrated in the stern.

This experience paid off for my daughter, Jane, and I in July at the North Americans at Lake Erie. We capsized twice in one race with winds 30-35 mph and managed to finish, only losing two or three places. In another race, we were thrown out of the boat on a run in high winds and large waves six to ten feet. We debated whether we should attempt to upright the boat and finish in such rough water. Jane was all for giving it a try. It uprighted much easier than expected and we sailed it dry on the run. It was wild, but of all my sailing last year, I think I'll remember that run the longest, for sheer excitement and sense of accomplishment.

In this particular race only 27 boats finished out of 60, but all the capsized boats self-rescued themselves in as severe conditions as you would sail in. The greatest danger any of us faced was swallowing a mouthful of Lake Erie! Some may criticise the race committee for holding a race in such severe conditions but I know most of us agreed with the race committee as it gave us a chance to sail in extreme conditions in relative safety - warm water, onshore wind and rescue boats. This experience could save us some day if we were caught in a squall when sailing alone.

Experimenting with new ratchet blocks the day before the Canadian Championship, my other daughter, Nancy, and I dumped three times in succession. Each time we were able to sail the boat dry within 150 yards. To me, the best part of being able to sail a boat dry, aside from the safety factor, is that when the wind is really blowing, it's annoying to ruin a good day of sailing just because you dumped the odd time.

I know by now that many of you will be thinking - "wouldn't it be a lot easier to learn to sail properly so that you wouldn't dump in the first place!" My answer to that is yes, but some of us learn more slowly than others and in the meantime, it's nice to know that capsizing is nothing to worry about.

With these few thoughts, I hope next time I sail by and I see you in the water, you will have a smile on your face and be completely relaxed.

3/4 inches, provided that the thickness may be less in fiberglass boats if suitable strengthening is provided including re-inforcement for all fittings attached to the transom. The transom shall conform to the class drawing with profile tolerance of 1/4 inch measured at right angles to the hull skin.

- 3.4 All boats shall be fully decked from the stem for a maximum length of 4 feet 9-1/4 inches and a minimum length of 4 feet 1-3/4 inches. The after edge of the foredeck shall not be forward of a line drawn from the forward edge of the mast to the most forward permitted shroud position at deck on each side. (See Class Rule 3). Side decks extending not more than 6-1/2 inches or less than 3 inches from the inside of the skin, shall be fitted between the foredeck and the transom, or until the after deck, if any, is reached. An after deck is optional. If fitted it shall not extend more than 3 feet forward of the outside of the transom. Deck overhang is optional maximum 3 inches beyond the outside of the skin including the rubbing strake at any point. No boat may be built or modified after the 1st of May 1963, so that at any point inside the skin the level of the side decks is below the sheer line.
- 3.5 In relation to boats built or modified after the 1st of May 1963, side benches shall be fitted on each side at thwart level (taken as highest point of the centreboard case) or below and shall extend forward at least as far as the shrouds from a point not more than 3 feet from the outside of the transom. They shall be of a width not less than 1 foot and not more than 1 foot 2 inches within these measurements.
- 3.6 The essential measurements of the centreboard case are indicated on the Measurement Diagram. The sides of the centreboard case shall not exceed 7/8 inches in thickness. The centreboard slot in the keel and hog shall be between 1/2 inch and 1-3/16 inches in width. The forward end of the slot shall not be more than 8 ft. 9 ins. from the lowest point on the outside of the transom and the afterend of the slot shall be not less than 3 ft. 9 ins. from that point.
- 3.7 The position of the centre of the centreboard bolt forward of the outside of the transom shall not be more than 8 feet 5-3/8 inches or less than 8 feet 2-3/4 inches. Only one centreboard bolt hole shall be allowed on each boat.
- 3.8 A false keel which should be bevelled so fair into the keel band, shall be on the outside of the shell so that there is a minimum of 1/2 inch and a maximum of 3/4 inches clear of the skin at the center extending from the fore foot to the transom. The width at any point shall not exceed 3-3/4 inches. The width at any point within 9 feet 4 inches of the after edge of transom shall not be less than 3 inches.
- 3.9 As from 1st April 1965 one bilge keel of length 4 feet + 1/2 inch. (excluding fairing) shall be fitted on each side of the boat showing at least 1/2 inch clear at the centre to the full length. Bilge keels may be faired to the hull. The faired section at each end of the bilge shall not exceed 6 inches in length. The total width of the bilge keel (including fairing) shall not be less than 2 inches nor more than 2-1/2 inches. All four edge fairings shall be similar. All four end fairings shall be similar. The bilge keels shall be fitted so that the weight of the boat shall bear on the main and only one bilge keel when the boat is placed on a level surface.
- 3.10 Sheer shall be a fair continuous concave curve.
- 3.11 Tumble home of the topside shall not exceed 1 inch on each side.
- 3.12 Transom scuppers not exceeding a total area of 100 square inches are allowed and/or two suction bailers not exceeding an effective cross sectional area of 2 square inches each (i.e. area of the smallest hole or holes through which all the extracted water

Amendments effective from January 1st, 1970 are indicated by a line in the margin

Amendments effective from January 1st, 1970 are indicated by a line in the margin

passes). Neither draining port shall be within 1-1/2" of the top of the transom or tiller port, or of the other draining port. The scuppers shall be fitted with closing devices which may be transparent and which shall never interfere with the action of the rudder; never act as an extension of the hull skin and be capable of being reclosed while sailing. The transom shall be adequately strengthened to withstand the forces applied to it while sailing. Other apparatus to make the boat self draining is not allowed.

3.13 The hull being one design, transparent hull panels are not permitted.

3.14 A tiller port not exceeding 9 inches in width by 4 inches in height is optional.

4. WEIGHT AND WEIGHING

4.1 All boats shall be weighed in a dry condition. Built in buoyancy apparatus air bags or other material to provide buoyancy of at least 600 lbs. shall be included in the weight of the boat. Buoyancy apparatus originally weighed with the boat shall not be removed or replaced unless the certified weight of the boat is checked by the measurer.

4.2 New plywood boats shall be weighed before they are put into water for the first time or otherwise wetted.

4.3 The dry weight of the completed hull, including the keel band and essential fixed metal work but stripped of all gear, including mast, boom, centreboard, detachable floor boards, pump (if any), all loose gear and rigging, shall not be less than 240 lbs.

4.4 If a boat is found to weigh less than the required weight owing to an error in building, permanent wooden or metal correcting pieces not exceeding 20 lbs. shall be fixed to the underside of the centre thwart and shall not be removed throughout the life of the boat.

5. CENTREBOARD

5.1 The centreboard shall not exceed 80 lbs. in weight.

5.2 When housed the centreboard shall extend neither above the sheer line nor below the keel. Only one pattern of centreboard is allowed of minimum width 11-3/8 inches measured at right-angles to the leading edge at a point on the leading edge 2 feet 6 inches from the bolt hole, and of a maximum dimension of 4 feet 2 inches from bolt hole to tip.

5.3 If of streamlined section, the centreboard shall be all wood apart from the usual protective edges and stiffening.

5.4 If of metal, the centreboard shall be of normal commercial flat sheet steel or aluminum not less than 1/4 inches in thickness. Any fairing shall not extend more than 1 inch from the edges.

5.5 Devices to change the pitch, twist or angle of the centreboard either automatically or manually are prohibited. Friction devices to hold the board in position only are allowed. The centreboard above the water line shall be flat with parallel sides.

5.6 Trim tabs, hinges or other devices on the centreboard are prohibited. The board shall rotate on a fixed centreboard pin.

5.7 Only one centreboard shall be used at any one regatta subject to replacement if damaged.

6. RUDDER

Either lifting or fixed rudders are allowed. The arrangement is optional. The blade must conform to the class drawing or pattern. The angle between the stock and the blade is optional.

7. SPARS AND STANDING RIGGING

The rig shall be single masted sloop rig with an alternative smaller rig.

7.1 General -

The type, section and weight of the mast and the boom are optional subject to rules 7.3 and 7.4 provided that:

7.1.1 The unrigged spars shall each pass through a circle of 4 inches diameter.

- 7.1.2 A maximum of one crosstree and/or one pair of jumper struts are used to stiffen the mast.
- 7.1.3 The jib stick or whisker pole for the foresail shall not be more than 6 feet overall.
- 7.1.4 The aft side of mast at deck level to the upper after edge of transom shall not be less than 10 feet 4-1/2 inches or more than 10 feet 5-3/4 inches.
- 7.1.5 The mast shall be sealed to keep out water or filled for at least the top 14 feet with closed cell expanded foam or foam pellets.
- 7.2 The distance of the shrouds at deck forward of the afterface of the transom shall not exceed 9 feet 1-1/2 inches.
- 7.3 **Mast**
- 7.3.1 Masts may be of wood or metal.
Metal masts shall be constructed of standard grade marine aluminum alloy. No special light-weight alloy may be used without the written approval of the Specifications Committee. Aluminum masts shall be constructed from a section with a minimum weight of 0.59 lbs. per lineal foot and a minimum wall thickness of 0.06". Tapering is allowed above the forestay attachment. The mast surfaces shall be relatively smooth with no shapes designed to change and improve its windage characteristics.
- 7.3.2 Only jumper struts and the crosstree will be allowed as in Rule 7.1. These may not be adjusted while underway.
- 7.3.3 Masts may only be rotated by the boom when securely attached to the mast in the horizontal plane to prevent over rotation beyond the normal boom swing. No other form of rotating devices are allowed.
- 7.3.4 The mast shall be restricted in its movement at the deck level within the limits given in Article 7.1.4 by permanent stops fitted to the deck. These may consist of a mast gate at the rear and blocking at the front. This new ruling shall apply to all boats after January 1st, 1970.
- 7.3.5 Mechanisms to alter mast position at the base while underway are prohibited.
- 7.3.6 Only one mast is allowed to be used at any one regatta subject to replacement if damaged.
- 7.4 **Booms**
- 7.4.1 Booms may be of wood or metal. Metal booms shall be of standard grade marine aluminum alloy. No special light-weight alloy may be used without the written approval of the Specifications Committee. Aluminum booms shall be constructed from a section uniform throughout its length excluding reshaping of the slot for the bolt rope. It shall be constructed from a section with a minimum weight of 0.59 lbs. per lineal foot and a minimum wall thickness of 0.060 inches. Sections of lesser weight or lesser wall thickness must be approved by the Specifications Committee.
If the boom is wood the section throughout its length shall be uniform.
- 7.4.2 No crosstrees, jumper struts, or other similar devices shall be allowed for bending or stiffening the boom. Boomvangs and mainsheet block arrangements are allowed.
- 7.4.3 Only one boom is allowed to be used at any one regatta subject to replacement if damaged.
- 7.5 **Shrouds and Forestay**
- 7.5.1 Shrouds or side stays shall not be adjusted or disconnected while underway. Turn buckles or pin setting fittings are allowed on the shrouds and forestay.

Amendments effective from January 1st, 1970 are indicated by a line in the margin

Existing boats with adjustable shroud devices shall be rendered inoperable while underway by such means approved by the measurer.

Loose or slack shrouds are permitted providing the shroud tension is not adjusted while underway.

- 7.5.2 All boats shall be fitted with a standing forestay such that either or both sails can be lowered at any time without endangering the stability of the mast or its security in the boat.

8. SAIL PLAN AND MEASUREMENT

- 8.1 The height of the sail plan shall not exceed 20 feet 6 inches measured from the sheerline in way of the mast, and the actual point of measurement shall be marked by the lower edge of a black band painted on the mast. The height of the attachment of the forestay and the job halyard shall not exceed 14 feet above the sheerline.
The height of the lower black band, above the sheerline, below which the top edge of the boom shall not be set, shall not exceed 2 feet or be less than 1 foot 8 inches.
- 8.2 Two sail plans are permitted, the standard rig of 125 sq. ft. maximum and a reduced rig of 90 sq. ft. maximum. The choice of rig is at the helmsman's discretion. The two maximum areas are to be considered as maximum for each selected rig but lesser areas are allowed for each type of rig as described below.
- 8.3 Mainsail - The measured area of the mainsail shall not exceed 90 sq. ft. The luff of the mainsail, (1) which shall not exceed 18 feet 6 inches shall be measured on the mast from the lower edge of the upper black band to the upper edge of the lower black band, which shall not be less than 1 foot 8 inches or more than 2 feet above the sheerline. No part of the headboard shall extend above the lower edge of the upper black band and the head-board shall not exceed 4 inches measured at right angles from the mast.
- 8.4 The measurement of the foot which shall not exceed 9 feet 8-3/4 inches shall be taken along the top of the boom from the inner edge of a black band painted on the boom to an extension of a line down the forward side of the mast groove, excluding any curvature. No part of the foot of the sail shall extend beyond the inner edge of the black band.
- 8.5 The area due to the curve of the leech shall not be included in measurement of the mainsail but the width measured at right angles to the luff at its mid point is not to exceed 6 feet 6 inches. The half height measurement shall be taken along the line of the fold (a) which is formed when the top forward corner of the headboard is placed on the bottom forward corner of the tack, with two halves of the luff coinciding and the sail smoothed out in dry condition on a flat floor, this measurement shall be taken over the full width, including roping, and any hollows in the leech are to be bridged by straight lines. Similarly a three quarter height measurement shall be taken by folding the top forward corner of the headboard on to the point formed at (a) above smoothing the sail and measuring the resulting crease which shall not exceed 3 feet 9-3/4 inches, effective for sails, made after September 15, 1965.
- 8.6 Four battens are allowed in the mainsail and these shall divide the leech into approximately equal parts. The length of the upper and lower batten pockets shall not exceed 2 feet 6 inches and the length of the other batten pockets shall not exceed 3 feet 4 inches. Mainsails which are not triangular are to be measured in accordance with Canadian Albacore Association rules for the measurement of sail area. The leech of the mainsail measured from the point where the sail leaves the mast at the head to the point where sail leaves the boom at the clew measured in a straight line, shall not exceed not 20 ft.

Amendments effective from January 1st, 1970 are indicated by a line in the margin

8.7 Small Mainsail –

- 8.7.1 The measured area of the small mainsail shall not exceed 63 sq. ft. Any boat with a small mainsail mainsail endorsed on her certificate shall have coloured bands placed on her mast and boom indicating a luff height of 18 ft. 6 ins. and a foot of 7 foot 2 ins. measured as in rule 8.4 and 8.5.
- 8.7.2 The width of the small mainsail at its half height shall be measured as in rule 8.5 and shall not exceed 5 ft. 4-1/2 ins.
- 8.7.3 Three battens are allowed in the small mainsail and shall divide the leech into approximately equal parts. The length of the battens shall not exceed 2 ft. 6 ins.
- 8.7.4 The leech of the small mainsail measured as in rule 8.6 shall not exceed 18 ft. 4 ins.

8.8 Foresail –

The measured area of the large foresail shall not exceed 35 sq. ft. and the measured area of small foresail shall not exceed 27 sq. ft. The luff measurement (L) shall be taken between the centre of the head and tack cringle and a diagonal measurement (D) from the centre of the clew cringle to the nearest point of the luff.

$$\frac{L \times D}{2} = \text{Area of foresail}$$

The areas due to curved edges of leech and foot shall not be included in measurement. No battens or other forms of stiffening are allowed in the foresail.

- 8.10 The centre of the grommets shall not be more than 1" from the edge of the sailcloth.
- 8.11 Sail Zippers or other similar devices for the purpose of changing sail area or shape are prohibited.
- 8.12 All sails that pass measurement on and after 1st April 1965 shall have inscribed in indelible ink in the tack corner, in letters at least half an inch high the initials of the measurer and the date of measurement.
Any sail not so inscribed after this date shall be deemed to be unmeasured. All replacements or spare sails shall be measured and their measurements endorsed on the certificate. Each endorsement shall be signed and dated by the measurer. No boat shall have registered for class racing more than two mainsails, two large foresails, one small foresail, and new registration shall not be accepted at a greater rate than one mainsail, one large foresail and one small foresail every twelve months, unless the Canadian Albacore Association is satisfied it is by way of replacement of lost or damaged sails. Foresails will be marked by the measurer with the mainsail number.
- 8.13 The official marking is A above the assigned number which shall be displayed on the sails as shown on the official drawing.

9. MATERIALS FOR MAINSAIL AND FORESAIL

- 9.1 All sails shall be made of cotton, or woven synthetic fibre, minimum weight 3.8 oz. and maximum 5-3/4 ozs. U.S. Standard (36" x 28-1/2") except that one transparent panel not exceeding 2 sq. ft. is permitted and shall be sewn into either main or foresail. This shall be in the lower half of the sail, and shall be no closer than 6 inches to any edge.
- 9.2 Every mainsail (without battens) set on boom, with clew hauled out and taut, must be capable of being rolled from foot to headboard tightly around the boom, without cracking the finish or cloth from which the sail is made.

10. SPINNAKERS

Spinnakers are not allowed in any races sponsored or sanctioned by the Canadian Albacore Association but individual clubs or groups may use spinnakers at their discretion. They should adhere to the one-design dimensions laid down by the Canadian Albacore Association as follows: The leech and luff shall not exceed 14 feet 0 inches ± 3 inches. Half the foot shall be 5 feet 9 inches ± 1-1/2. These measurements shall be taken under a 5 lb.

tension. Girth shall be measured with the sail folded in half putting the luff and leech and the two clews together and then spread evenly and flat on the floor without tension. The measurement shall be taken from the head cringle 7 feet 0 inches down the opposite side of the sail as folded. This measurement shall be 5 feet 5 inches ± 1-1/2 inches. It shall be taken when the cloth between the head of the sail and the points of measurement and immediately below are spread out smoothly on the floor. The sail parallel to the girth measurement shall be pulled only enough to smooth out vertical wrinkles, but not enough to produce transverse wrinkles. Spinnaker pole length including fittings shall not be greater than 4 feet 6 inches. Sail cloth weight shall be not less than .75 oz. nylon. Only one spinnaker shall be allowed to each boat. Attachment of the spinnaker halyard shall be not more than 14 feet 1 inch above the sheerline.

11. SAIL MARKINGS

The Canadian Albacore Association requires standardized sail markings for uniform identification of the class in Canada. The official marking is A as per the official drawing above the number. Official Canadian numbers are assigned by the Canadian Albacore Association, however, a block of numbers may, in the discretion of the Executive Committee of the Association, be assigned to an approved builder who may assign numbers to boats produced by that builder on behalf of the Association. A boat retains its sail number (corresponding to the hull number) throughout the life of the boat. When the ownership of a boat is transferred the number of the boat and sail remains although the boat is transferred.

Sail numbers, letters and emblems shall sharply contrast in colour with the sail and shall be placed at different heights on the two sides of the sail, those on the starboard side being uppermost, to avoid confusion owing to translucency of the sail.

Existing owners are not required to change their markings or numbers except in the case where confusion might arise in the opinion of the Specifications Committee. Original R.Y.A. numbers may be retained but must be placed below the A. No numbers will be duplicated in the Canadian registry. Details of the size of numbers are shown on the official drawing.

12. BUOYANCY

- 12.1 Buoyancy of any type may be fitted under the foredeck, aft deck and side benches. Additional buoyancy may be carried provided that this does not extend into the clear plan opening of the cockpit, nor into the floor space. The clear plan opening of the cockpit is from the after edge of the foredeck to 3 feet forward of the outside face of the transom and between the faces of the shell athwartships above the highest point of the centreboard case. The floor space shall be taken as 1 foot 2 inches from the centreline between the shrouds to 12 inches from the centreline 3 feet forward of the outside face of the transom.
Buoyancy apparatus giving a positive buoyancy of not less than 600 lbs. which shall count in the hull weight, shall always be carried in the boat whether cruising or racing. Removable buoyancy equipment included in the hull weight, shall be stamped with the boat's number and form part of its permanent equipment which shall not be removed or replaced unless the boat is re-weighed in accordance with rule 4.1. The disposition of weighed buoyancy shall be such that the flooded boat, in full racing trim, less sails, shall remain with the gunwales clear of the water and reasonably stable, both fore and aft and laterally, when persons of minimum combined weight of 600 lbs. are standing in the boat (not immersed above the knee) between the mast and the aft end of the cockpit. This test shall be for at least 30 minutes, but the measurer shall be satisfied that the equipment can be expected to support the boat and crew for long periods. The mast shall be tested for floatation. (Rule 7.1.5).
- 12.2 The measurer shall satisfy himself that the boat is equipped with effective buoyancy as required by these rules and that any inflatable buoyancy bags are in sound condition. He shall also

confirm that the attachment and stowage of other than built-in buoyancy is effective.

- 12.3 It is the duty of the owner to see that the buoyancy at all times complies with rule 12.1. The Certificate of Registration is valid for twelve months from the date of the original buoyancy test, or the annual retest, provided that the certificate is suitably endorsed with the date of the buoyancy test and signed by an appointed buoyancy tester. A sailing committee may at any time order a buoyancy test, the result of which shall be endorsed on the certificate of registration.
- 12.4 Hulls of fibreglass construction must have at least 6 cu. ft. of permanent buoyancy in the form of rigid foam properly secured to the boat as part of the 600 lbs. of positive buoyancy to prevent sinking of the boat if one or all air tanks are punctured and/or flooded. After January 1st, 1970 fibreglass boats built shall have buoyancy in at least 3 units of tanks moulded to the shell. Such tanks shall be permanently fitted with reserve buoyancy units in solid foam form giving each tank at least 125 lbs. of positive buoyancy. The builders shall submit for approval their proposals for the distribution of the required buoyancy to the Specifications Committee before production is commenced on that specific model.
- 12.5 By January 1st, 1970 all existing fibreglass boats shall have at least 6 cubic feet of permanent buoyancy as part of the 600 lb. of positive buoyancy. Such permanent buoyancy shall be designed and secured in the boat to support the boat for long periods of time in the event of loss or failure of the air tanks or bags, all to the satisfaction of the measurer.
- 12.6 All boats with rigid air tanks constructed of fibreglass shall have inspection plugs or ports to check on air tightness and for draining.

13. CREW

The racing crew shall consist of two or more persons including the helmsman. In special circumstances it may be desirable for a boat to be raced single handed. Prior permission of the sailing committee must be obtained.

14. GENERAL

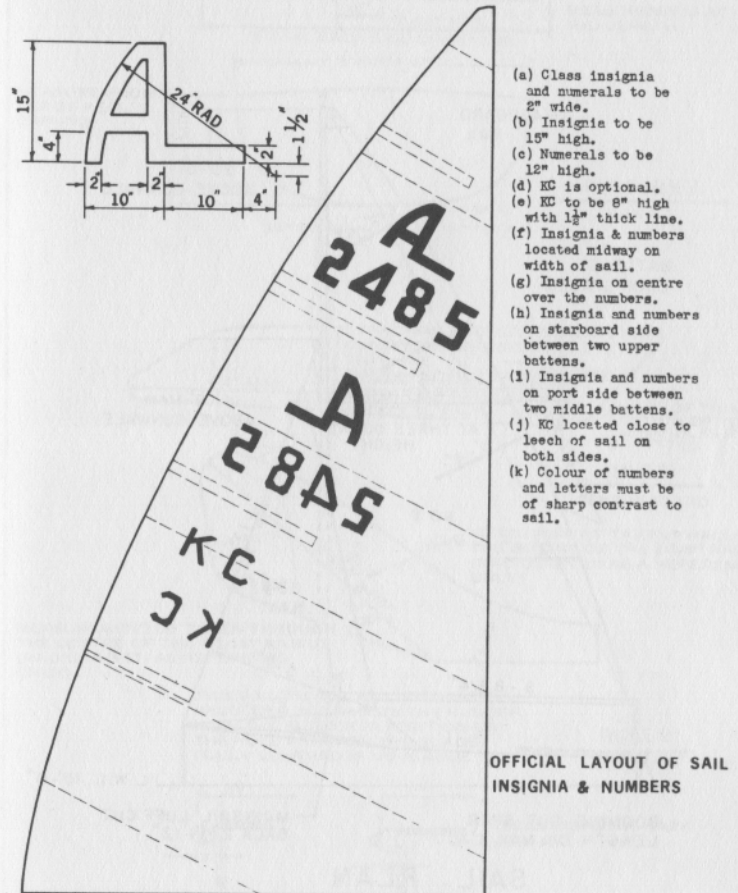

- 14.1 Apart from items already mentioned, all hull fittings, centreboard winches are optional.
- 14.2 There is no restriction on the finish.
- 14.3 The use is prohibited of any apparatus or contrivance outboard, or extending outboard, and attached to the hull, spars or rigging, to the person of the helmsman or crew, the purpose or effect of which is or may be to support or assist in supporting a member of the crew outboard or partially outboard.
- 14.4 The registration (sail) number on boats built after 1964 shall be carved into the keelson, the figures shall be at least 1 inch high on plywood boats. Builders of fiberglass boats must put the hull number in the boat in a manner approved by the specifications committee. All numbers with the owner's name and address shall be reported to the Canadian Albacore Association Secretary for the class registry.
- 14.5 The Executive Committee may from time to time specify that possession of a valid measurement certificate shall be a condition of entering any event sponsored by the Canadian Albacore Association. Clubs or Fleets recognized by the Canadian Albacore Association may require a valid measurement certificate as a condition of entering events sponsored by the Club or Fleet.

15. ADMINISTRATION

- 15.1 All questions of conformity with, or amendments to these rules, shall be dealt with as may be required by the Canadian Albacore Association. The Specifications Committee shall have charge of the administration of these rules and specifications including the issuance of Measurement Certificates.

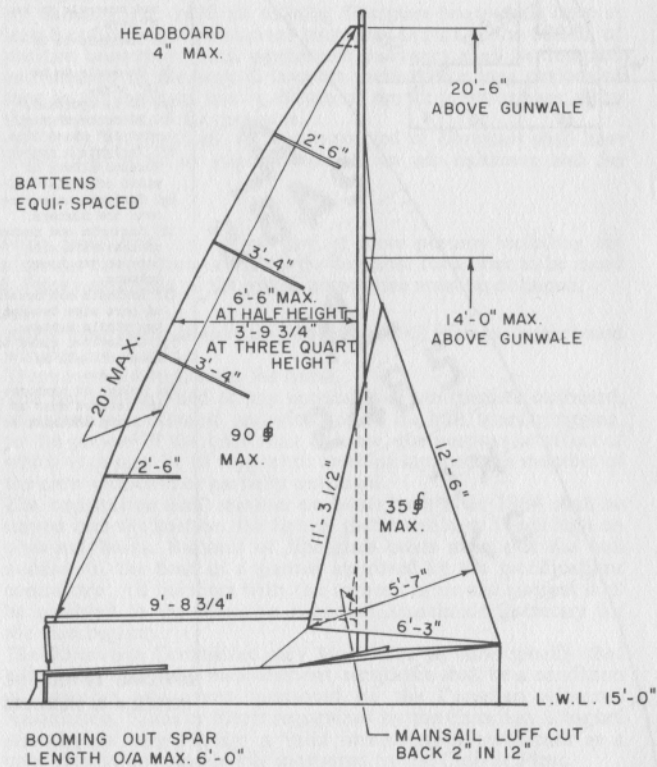

- 15.2 The Specifications Committee shall be empowered to approve new builders and to withdraw approval provided that such decisions shall be ratified by the Executive Committee.
- 15.3 Amendments to these rules will be avoided as far as possible. However, amendments to these rules may be made by the Executive Committee and shall be in force pending ratification at the next subsequent general meeting of the Association.
- 15.4 Change of Ownership:
Measurement Certificates become invalid with a change in ownership. When a boat is sold, send the certificate to the Canadian Albacore Association Secretary along with the name and address of the new owner. The Secretary will forward a new certificate to the new owner.

Amendments effective from January 1st, 1970 are indicated by a line in the margin

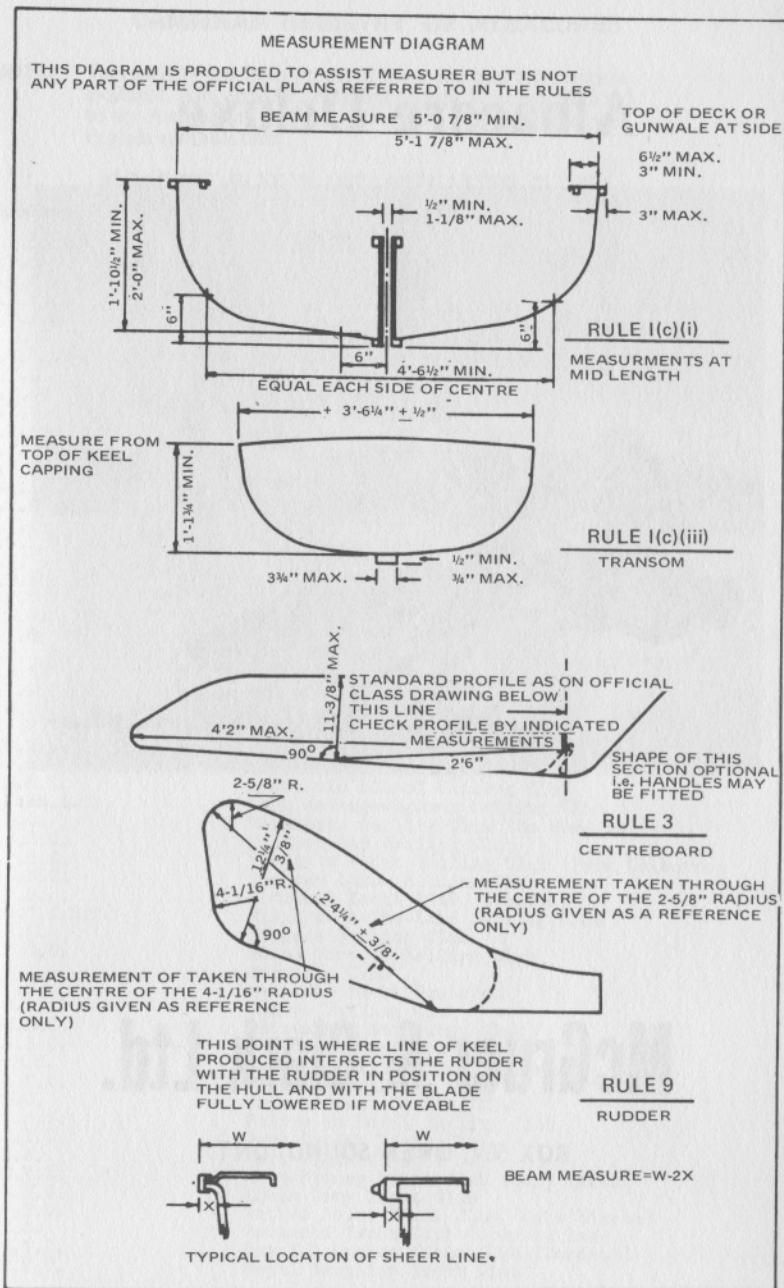

OFFICIAL LAYOUT OF SAIL
INSIGNIA & NUMBERS

- 15.5 An official measurer is appointed by the Specifications Committee in each area. The owner must apply to the measurer, make an appointment and prepare by having black bands painted on the mast and boom according to the class rules prior to measurement. He must present a cheque for five dollars (\$5.00) payable to the Canadian Albacore Association. The measurer sends this along with the completed measurement form to the Secretary Treasurer who will issue the certificate to the owner. The measurer is entitled to be reimbursed four dollars. (\$4.00) for measuring a boat and sails by the Canadian Albacore Association and in addition may charge the owner one dollar for either an annual buoyancy test or measurement of new sails. He must send a record of his endorsement on the certificate of new sails to the Association.

SAIL PLAN

The dimensions shown are as a guide only, Rule 8 shall govern.

Albacore Deluxe

McGruer & Clark Ltd.

THE GRAMPIAN ALBACORE

designed by Uffa Fox

*Canadian built by Grampian
Marine under special license
with Fairey Marine*

- Stainless Steel Rigging
- Anodized Mast and Boom
foam filled
- Wide centre board trunk for
use with wooden centre
board if required
- Sliding Track for main sheet
- Aluminum Centre Board
- Additional overhang for
stability
- Oiled Teak Splash Rail and
Thwart for easy maintenance

**A winner everytime in both
American and Canadian 1967
Albacore Championships.**

*Grampian Albacores finished 1st,
2nd and 3rd in the 1967 Canadian
Albacore Championships and 1st,
2nd, 3rd and 4th in the U.S.
Albacore Championships.*

Grampian MARINE LTD.

A Lloyd's approved yard for quality conscious buyers

Area Code 416 - 845-5641

YEAH MAN, BUT WE ONLY FOULED YOU ONCE!

by

Geoff. Revett

Now that Society's liberalising influences have affected the Yacht Racing Rules, and we are allowed a second (or third, or forth, or...!), chance at rounding correctly the marks of a course, let's remember that these 'generous' terms apply only to Rule 52,1. - Touching a Mark.

As dinghy fleets continue to increase in size - and in correspondingly aggressive competitive spirit - the number of occasions where boats are within 'risk of collision' also increases. The confusion of mass starts and the conglomerations at turning marks, are but two obvious instances of possible misadventure leading to errors of judgment and subsequent rule infractions.

Whilst these conditions are perhaps a necessary evil, they should not provide an excuse for rule infractions to be ignored. The "Sail on old chap!" attitude, perhaps inspired by a sense of 'comraderie' has no place in yacht racing!

Sure, it's 'tough Cheddar' having to retire from a race, especially at the start, and having driven all night to get there. And it's often difficult to get opponent's sail numbers, and protests are a nuisance to say the least, but if we all re-affirm our desire to race within the rules - both word and spirit, we all shall be winners.

I know from the experience of having sailed against many 'top notch' sailors in Europe and North America that, however disheartening it may be at the time of a rule infraction, and however great the desire to continue racing may be, the helmsman in error withdraws from the race immediately.

I believe that if our racing is to mean anything at all, it has to be this way. So - let's sail it like it is, and keep our racing beautiful!

SAFETY RULES

1. Add buoyancy in the bow and have your buoyancy test each season.
2. Carry 2 large plastic pails clipped or tied to the boat.
3. Be in good physical condition to avoid rescue fatigue.
4. Climb to the high side quickly and put a foot on the centerboard.
5. Be sure the mast is sealed completely or foam filled above the spreaders.
6. Wear woollens, storm wear and a life jacket in cool conditions.
7. Carry a 5 lb. anchor and 100 ft. of 3/16 nylon line to prevent drifting into rocks.
8. Prevent mast going right down if possible.
9. Use shock cord or a jam cleated line to prevent the board from dropping into the trunk if upside down.
10. Fasten loose gear and be prepared to drop sails quickly.
11. Use a pair of leather faced gloves with the fingers cut off to prevent slipping off the board or boat and to hold sheets easier.
12. Brief your passengers and crew on what to do in case of capsize and always insist on children wearing lifejackets.
13. If you must wait for help, tie a jib sheet across the hull to the opposite fairlead to hold on to.
